This invention relates to nucleic acid molecules AAH88708 - AAH88796

isolated from Physcomitrella patens (a moss), which encode carbohydrate

metabolism related proteins (CMRP) represented in AAM0022 - AAM00110.

Concluded in the invention is a vector containing the CMRP CDNA, and a

concluded in the invention is a vector containing the CMRP CDNA, and a

corprehence of the containing the CMRP CDNA, and a

corprehence of the containing of a plant cell) is

corprehenced in the nucleic acid molecules are suitable for modifying a

carbohydrate production system in a host, e.g., microorganisms and

carbohydrate production system in a host, e.g., microorganisms and

carbohydrate production system in a host, e.g., microorganisms and

carbohydrate production system in a host, e.g., microorganisms and

carbohydrate production system in a host, e.g., microorganisms and

carbohydrate production system in a host, e.g., microorganisms and

carbohydrate production system in a host, e.g., microorganisms and

carbohydrate production system in a host, e.g., microorganisms and

carbohydrate production system in a host, e.g., microorganisms and

carbohydrate production system in a post, e.g., microorganisms and

carbohydrate production system in a post, e.g., microorganisms and

carbohydrate production system in a post, e.g., microorganisms

carbohydrate production system in post, the generic engineering of Corynebacter xylinum and Chlorella to

capacide in the sequencing of the CWRP cDNA sequences of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ij

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present sequence represents a protein encoded by open reading frame (ORF) D of a movel polynucleotide sequence designated "GS". GS is a pathogenecity island of 8 kb of DNA comprising a core region of 5.75 kb with multiple ORFs and an adjacent transmissable element of 2.5 kb. The ORFs, and also the transmissable element, encode proteins which may be linked to pathogenecity, such as providing receptors for cellular recognition. GS was discovered and characterised using differential DNA analysis technology. It is found within Mycobacterium paratuberculosis and it has also been identified in Mycobacterium avium subspecies

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          silvaticum. These pathogenic mycobacteria cause chronic inflammation of the intestine and Crohn's disease in humans. The protein products of the ORFs of GS can be used for detecting mycobacteria or for diagnosing, treating or preventing mycobacterial disease. In particular they can be used as vaccines for inflammatory diseases such as Crohn's disease or sarcoidosis in humans or Johne's disease in animals.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                  87

                                The present sequence represents a protein encoded by open reading frame (ORF) D of a novel polymucleotide sequence designated "GS". GS is a pathogenecity island of 8 kb of DNA comprising a core region of 5.75 kb with multiple ORFs and an adjacent transmissable element of 2.5 kb. The ORFs, and also the transmissable element, encode proteins which may be linked to pathogenecity, such as providing receptors for cellular recognition. GS was discovered and characterised using differential DNA analysis technology. It is found within Mycobacterium paratuberculosis and it has also been identified in Mycobacterium paratuberculosis and it has also been identified in Mycobacterium products of the intestine and Crohn's disease in humans. The protein products of the ORFs of GS can be used for detecting mycobacteria or for diagnosing, treating or preventing mycobacterial disease. In particular they can be used as vaccines for inflammatory diseases such as Crohn's disease or saccoidosis in humans or Johne's disease in animals.

The invention relates to a crystalline GDP-fucose synthetase (GFS). This was used to determine the crystal structure of GFS from Escherichia coli (AAY81360) to a resolution of 2.2 Angstroms. The structure of the enzyme when bound to its cofactor NADPH and product NADP+ has also been determined. The structure of GFS revealed it to be a member of the short chain dehydrogenase/reductase (SDR) family of enzymes which have a conserved core tertiary protein fold and a serine, tyrosine and lysine catalytic triad. GFS is particularly closely related to E. coli UDP-Galattic triad. GFS is particularly closely related to E. coli UDP-Galattic as a human catalytic triad as FX protein (AAY81351), which has 29% amino acid dentity. GDP-fucose is synthesised in a three-step reaction from GDP-mannose, with the second and third steps (epimerisation and GDP-mannose, with the second and third steps (epimerisation and COP-mannose, with the second and third steps (epimerisation and COP-mannose, with the second and third steps (epimerisation and COP-mannose, with the second and third steps (epimerisation and COP-mannose, with the second and third steps (epimerisation and COP-mannose, with the second and third steps (epimerisation and COP-mannose, with the second and third steps (epimerisation and COP-mannose, with the second and third steps (epimerisation and COP-mannose, with the second and third steps (epimerisation and COP-mannose) is the sugar donor. In humans, a defect con GDP-mannose is not seeful for identifying its agonists and antagonists and is useful for the design of immunosuppressants that act copy by blocking selectin mediated cell adhesion. The present sequence

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present invention describes an expression vector comprising a promoter linked to a nucleic acid (1) that encodes a prokaryotic enzyme (II) having both epimerase and reductase activity, for the catalysis of conversion of GDP (guanosine diphosphate) 4-keto-6-deoxymannose (III) to GDP-fucose (IV), where the vector lacks an Escherichia coli wcal coding region. An expression vector is specifically claimed where (I) encodes Escherichia coli YEF B. The present sequence represents the E. coli YEF B protein. (II) is used for production of (IV) which is then used to prepare fucosylated oligosaccharides (A) by enzymatic fucosyl transfer, e.g. to modify oligosaccharide components of glycoproteins or glycolipids, such as insulin, human or bovine growth hormones, tissue plasminogen activator, interleukins and viral antigens, or chimeric products such as immunoglobulin derivatives. (A) are variously useful as the rappeutic and diagnostic agents and in foods. Combining two activities in a single enzyme simplifies the process, allowing efficient synthesis of complex fucosylated oligosaccharides in a single reaction vessel from readily available starting materials. The method is suitable for large scale synthesis, e.g. 0.2 kg bacches. (II) can be expressed efficiently in prokaryotic cells (contrast similar mammalian enzymes).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          KVGGIHANNTYPADFIGVNLQIQTNVIHSAYEHGVKKLLFLGSSCIYPKFAPQPIPESAL 126

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    reductase. The enzyme catalyses the conversion of GDP-D-mannose to GDP-L-galactose. The enzyme can be modified, and used to produce transgenic microorganisms, which can be used in fermentation techniques to produce vitamin C (ascorbic acid, L-ascorbic acid). The enzyme is modified to increase its action. Other ascorbic acid pathway enzymes which may be used in the method of the invention include hexokinases, plosphomannomutases, GDP-D-mannose iODP-L-galactose phosphorylases, phosphomannose iODP-L-galactose epimerases, GDP-L-galactose and L-galactose and L-galactose and L-galactose dehydrogenases. The methods can be used for the production of ascorbic acid or esters using microorganisms or plants.
                                                                                                                                                                                                                                               :|:| : |||::||: :|||::|| 304
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 GDP-4-keto-6-deoxy-D-mannose epimerase/reductase; GDP-D-mannose; GDP-L-galactose; vitamin C; ascorbic acid; L-ascorbic acid; ascorbic acid pathway enzyme; hexokinase; glucose phosphate isomerase; phosphomannomutase; L-galactose dehydrogenase; phosphomannomutase; L-galactose dehydrogenase; GDP-D-mannose pytrophosphorylase; GDP-D-mannose:GDP-L-galactose epimerase; GDP-L-galactose phosphorylase; L-galactose-1-P-phosphatase; L-galactose phosphorylase; C-galactose-1-P-phosphatase; L-galactono-gamma-lactone dehydrogenase; ester.

The protein shows homology to the E. coli WcaG colanic acid capsule protein. The use of nucleic acids derived from assembly and transport genes, particularly wbd (transferase), wzx (flippase) and wzy (polymerase) genes, within O antigen gene clusters
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Nucleic acid molecules specific for bacterial polysaccharide antigens - useful for detecting specific strains in, e.g. food, faeces or patient samples

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     BXBXSXXXXXX
                   The invention relates to isolated polymucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polypeptide (II) sequences. (I) is useful as hybridisation probes, and for chromosome and gene mapping, and in recombinant production of (II). The polymucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques (C restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical inaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polymucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations cresponsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and confidential and or acid sequences. ABG00010-ABG30377 represent novel human diagnostic amino acid sequences of the invention.

Note: The sequence data for this patent did not appear in the printed appear application.

This invention relates to nucleic acid molecules AAH88796

isolated from Physcomitrella patens (a moss), which encode carbohydrate
metabolism related proteins (CMRP) represented in AAM0022 - AAM00110.

Corpubacian related proteins (CMRP) represented in AAM0022 - AAM00110.

Included in the invention is a vector containing the CMRP cDNA, and a
corpubacterium or Brevibacterium, moss or algae or a plant cell) is
corpubacterium or Brevibacterium, moss or algae or a plant cell) is
useful for producing a fine chemical such as carbohydrates, cofactors
and/or enzymes. The nucleic acid molecules are suitable for modifying a
carbohydrate production system in a host, e.g., microorganisms and
carbohydrate production system in a host, e.g., microorganisms and
carbohydrate production system in a host, e.g., microorganisms and
carbohydrate production system in a host, e.g., microorganisms and
carbohydrate production system in a host, e.g., microorganisms and
carbohydrate production system in a host, e.g., microorganisms and
cuther species which are useful to modify the biosynthesis of starch,
cell wall polysaccharides and sugars. The nucleic acid molecules may be
utilised in the genetic engineering of Corynebacterium and Chlorella to
make it a better or more efficient producer of one or more fine
chemicals. Mutagenesis of one or more CMRPs may also result in CMRPs
chemicals. Mutagenesis of one or more CMRPs may also result in CMRPs
chemicals. Mutagenesis of one or more CMRPs may also result in CMRPs
chaving altered activities which indirectly impact the production of one
or more desired fine chemicals from plants. Primers AAH88705 - AAH80707
are used in the sequencing of the CMRP CDNA sequences of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               QAYRIQHGWDAISGMPTNLYGPNDNFHPENSHVLPALMRRFHEAKVNGAEEVVVWGTGSP 209

                                                                                                                                                                                                                                                                                                                                                                          This is the protein product of the wbdJ gene (ORF6) of a gene cluster (see AAX06748) involved in the biosynthesis of the Escherichia coli oll o antigen. It has high amino acid identity with the wead gene product and is likely to have a function in the antigen sugar biosynthetic pathway. The use of nucleic acid molecules derived from particular assembly and transport genes, particularly wbd (transferase), wzx (flippase) and wzy (polymerase) genes, within O antigen gene clusters improves the specificity of methods for the detection and identification of O antigens, e.g. in testing food or faecal-derived samples, or samples from patients. The O antigen is a major virulence factor of enteropathogenic E. coli strains that cause diarrhoea and haemorrhagic colitis.
                                                                                                                                                                                                                                                       Nucleic acid molecules specific for bacterial polysaccharide antigens - useful for detecting specific strains in, e.g. food faeces or patient samples
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      DB 20; Length 307;

Other name: Soybean RFLP probe; date: 4/20/99; Submitted to the
Database of Genome Survey Sequences (GSS) on 09/27/99; DNA sequence
of Soybean RFLP probe A890. Clones were obtained from Biogenetic
Services, Inc. More information is available at
'http://chrysie.tamu.edu/medicago'.
Seq primer: T3 (AATTAACCTCACTAAAGGG)
